

CERTIFICATE OF MEDICAL ACKNOWLEDGEMENT

This is to certify that the Computed Tomography (CT) pelvimetry dataset and associated research documentation compiled by Mr. MUTHUKUMAR C, Research Scholar in Anatomy, USN No. 24PH14ANA01, Sri Siddhartha Academy of Higher Education (SSAHE), Tumakuru, in pursuance of the Ph.D. thesis entitled:

"A COMPUTED TOMOGRAPHY EVALUATION OF PELVIC FLOOR THICKNESS AND BONY DIMENSIONS AMONG WOMEN FROM HILLY AND INLAND REGIONS OF SOUTH INDIA: A COMPARATIVE CROSS-SECTIONAL STUDY"

has been duly examined and is hereby formally acknowledged. The dataset comprises 10 sample female patient studies (5 Hilly-region + 5 Inland/Plain-region) sourced from institutional PACS repositories. The following is declared:

- 1. Pelvimetric Accuracy:** The bony pelvimetric and pelvic floor morphometric parameters derived from this dataset conform to established radiological reference standards and are verified as anatomically accurate across all measured planes.
- 2. Medical Significance:** The comparative assessment of pelvic floor dimensions across the study cohorts constitutes a substantive radiological contribution to the understanding and clinical evaluation of pelvic floor disorders.
- 3. Academic Merit:** The dataset structure, measurement methodology, and derived parameters meet the scientific standards required for academic publication and evidence-based research in the field of pelvic floor medicine.
- 4. Ethical Compliance:** The dataset has been compiled in strict accordance with patient confidentiality obligations, institutional ethics requirements, and accepted clinical documentation standards.

The research presented herein is formally acknowledged as medically substantiated and academically rigorous, with recognised scope for future advancement and broader application in the field of pelvic floor medicine.
